

### i-Concept demonstrates portals during Online Educa

More than 2000 decision makers from 90 countries will gather in Berlin from 28 to 30 November for the annual global e-learning event Online Educa Berlin. From the Potsdam II stand A13 i-Concept will demonstrate its versatility in portal expertise with Moodle, Sharepoint and i-Engine. All multilingual learning portal solutions, catered to specific needs and wishes of the organisation and consistent with corporate identity. Visitors can win a free portal!

### Learning portal for Albeda College

The 2500 employees and 25000 students of the Albeda College use an internally hosted i-Engine platform for the public websites, extranets, intranets and e-learning environments. Over 100 editors co-operate in website content management. Students access the extranet for their timetables and grades. Various departments collaborate with partner organizations through custom workflow applications.

### CENTA Enterprise Information Portal

i-Concept developed the Enterprise Information Portal for the German multinational CENTA Transmissions. With this portal the employees of the engineering, marketing and sales department streamline their collaboration by timely sharing of relevant information. The portal contains sophisticated applications like business intelligence, product development process management and e-learning.

### Vodafone Secure Mobile Portal

Vodafone uses customized i-Concept portal technology for their Secure Mobile Guardian service. This service helps IT managers and system operators with the management of their mobile security policies. More and more companies have a growing mobile workforce which asks for centralized professional remote installation of software and support, or even "remote wipe" in case of theft or abuse.

### Marketing Support Portal for Heinz

This summer Heinz launched a series of marketing campaign sites in Europe with branding, loyalty and personal customer contact as objectives. Visitors can order personalized cooking aprons, photos printed on canvas and Swiss and Austrian European Championship football shirts with their name on the back. These multilingual websites with webshops and the related back-office portal for production and logistics arose from the versatile i-Engine.net.

### Free e-learning Authoring tool Studywiser.com

Studywiser.com is an e-learning framework for author, trainer and learner. The basis is a user-friendly e-learning content management system with features like reuse of content and export of content to XML. The default learning environment of Studywiser content is i-Engine.net. In this sophisticated learning environment the learner can be invited to the course(s), followed form start to end, including an automatically calculated exam and certificate sent by e-mail. The technology is available in the ASP model (hosted or Software as a Service) but can also be licensed and installed on your own server, for example as part of your intranet or company portal. The Content and Learner Management Systems are developed with optimal compliancy to standards like IMS, AICC and SCORM. Start using the Studywiser authoring environment for free and create your own experimental learning environment.

### How Enterprise 2.0 is i-Engine?

The term Enterprise 2.0 is derived from Web 2.0, a buzzword that announced the new phase of internet as the social network of software, people and content. Web 2.0 sites like Xing and Facebook prove how the internet usage can change in a revolutionary way once again. These sites enable the internet user to find old friends, make new ones and to exchange information almost instantly. It improves the so called "social efficiency" significantly. Enterprise 2.0 does something alike. It increases the collective efficiency of the organisation by enabling smarter collaboration between colleagues and other stakeholders with handy internet tools and technology.

To adapt to these new ways of collaboration is not as easy as it looks for everyone.

It has already become common to work together beyond borders and time zones via e-mail, Skype and intranet. Sharing documents outside the company network with colleagues, customers and suppliers on systems like GoogleDocs is still difficult to accept, even for many professionals. Especially for the control freak types a mind shift is needed for the idea that partnerships can start ad hoc with experts on the other side of the world, found via wiki, weblog or a community, to exchange business specific information with, but whom you will probably never meet face to face.

The impact of Enterprise 2.0 is determined by the useful usage of contacts and information present on intranet and internet, and helping to get things done better and faster. Enterprise 2.0 has better prospects within an open innovative organization with a "getting things done" mentality than in a closed environment where nobody is willing to take risks and changes are slowed down. As the global market is becoming more competitive by the day, Enterprise 2.0 will prove to be more than a buzzword.

i-Engine as a closed intranet already provides enormous efficiency improvements by the oiled content management systems and the user friendly tools for information exchange. i-Engine in a portal or community setting enables companies, associations and all other organisations to involve employees, members, partners and even third party applications. It goes without saying that risk assessment and security measures are needed and fear should be overcome, but after that you will see that i-Engine users will discover and use the advantages of these flexible and easy to use Enterprise 2.0 features. Test it yourself on [www.i-engine.net](http://www.i-engine.net).
